

Capacity Scale Incentive: Valid DA Capacity Incentive

Formula:Valid DA Capacity Incentives = Correlated amount of the performance level × The number of valid DA × Rider Attendance Rate;

*Rider Attendance Rate = Average of Attendance Rates for each Valid DAs;
Attendance rate for each valid DA = Number of valid attendance days in the current month / (Number of calander days - 4). If the attendance rate >1, it will be calculated as 1;

Calculation:

- Valid DA * Capacity Target Setting:**In each month for each partner for each type of vehicle, there would be 4 specific numbers as requested amount for valid DAs,and these numbers correlated to performance level A/B/C/D. Targets will be announced at the beginning of the month.
- The performance level** would be evaluated based on the total valid DA number at the end of month, compared with its targets in this month. and the scale incentive will be paid for all of the valid DAs with correlated vehicle of the partner.
- New join courier:**Riders who joined in the last 7 days of the month are not eligible to qualify as valid DA.
- Riders who delivered tasks in the past, their first online date is automatically considered as the first date of month.

Definition of VDAs:

Rider Type	Daily Valid Standards	Monthly Valid Standards
Shift Riders	<u>The natural day’s effective online duration not less than 10 hours;</u> <u>The proportion of effective online duration for each shift ≥ 90% of the total shift duration;</u> <u>Complete at least 2 order per day;</u> - Late log-in or early log-out is not allowed ;	Valid days ≥ (Calendar days-4 days) <i>(In case the DA joins mid-month, he/she should be present for 90% of the remaining calendar days)</i> Minimum monthly completed orders requirement: Complete at least 200 orders per month(both Bike & Car, the rider joining in the middle of the month calculated based on attendance rate) Must valid days definition: In each Thursday–Friday–Saturday cycle in April, the rider must achieve valid days on any two of the three days. If the rider does not meet the mandatory day requirement, the entire month will not be considered a VDA.

Valid DA Capacity Incentive				
Performance Level	Valid DA capacity target (Example)	Bike		Car
		Segmented payment (per valid DA/KWD)		Segmented payment (per valid DA/KWD)
A	80%<= but <100%	145		180
B	60%<= but <80%	90		130
C	50%<= but <60%	35		80
D	<50%	0		0

Experience Incentive:

Formula:Experience Incentive= Reward Amount Corresponding to Performance Level × Number of Valid DAs × Rider Attendance Rate;

*Rider Attendance Rate = Average of Attendance Rates for each Valid DAs;
Attendance rate for each valid DA = Number of valid attendance days in the current month / (Number of calander days - 4). If the attendance rate >1, it will be calculated as 1;

Calculation:

- **The level of experience incentive is determined by taking the lower level between the [experience target achievement level] and the [efficiency target achievement level].**
 - **[Experience Target] Setting:** In each month for each type of vehicle, there would be specific targets of each experience metric with different weights assessed on rider level, and the actual target fulfilment rate will be calculated, which is correlated to performance level A/B/C/D. Targets will be announced at the beginning of each month.
 - **[Efficiency Target] Setting:** Each month, specific monthly order completion targets will be set for each type of vehicle and assessed at the rider level. The actual number of orders completed by each rider will be calculated and linked to performance levels A/B/C/D. Targets will be announced at the beginning of each month.
- **The performance level** will be evaluated based on the all monthly orders of riders and only valid DA will be eligible for this.

Experience incentive					
Performance Level	Experience target fulfillment rate	Bike Efficiency Threshold	Car Efficiency Threshold	Bike Segmented payment (per valid DA/KWD)	Car Segmented payment (per valid DA/KWD)
A	>=100%	380	330	155	190
B	98%<= but <100%	330	280	100	140
C	96%<= but <98%	280	230	45	90
D	<96%	280	230	0	0

Example:

Target1 : on time rate				Target2 : order completion rate				Experience target achievement level	
Scenario	Target	Actual (Example)	Score (=Actual/Target*60%)	Scenario	Target	Actual (Example)	Score (=Actual/Target*40%)	Scenario	Total Score (Example)
1	98.5%	99%	60.30% (=99% / 98.5%×60%)	1	100%	100%	40% (=100% / 100%×40%)	1	100.30%--A
2	98.5%	98%	59.70% (=98% / 98.5%×60%)	2	100%	97%	38.8% (=97% / 100%×40%)	2	98.50%--B
3	98.5%	96%	58.48% (=96% / 98.5%×60%)	3	100%	95.1%	38.04% (=95.1% / 100%×40%)	3	96.52%--C
4	98.5%	93% (bottom line)	0	4	100%	95% (bottom line)	0	4	0%--D

Efficiency target achievement level		
Vehicle	Actual Efficiency (Example)	Efficiency target achievement level
Bike	400	A
Bike	240	D
Car	300	B
Car	220	D

Experience incentive						
Vehicle	Experience target achievement level (Example)	Efficiency target achievement level (Example)	Final experience performance level	Experience incentive for this level	Attendance rate	Experience incentive for this rider(KD)
Bike	A	A	A	155	100%	155
Bike	B	D	D	0	100%	0
Car	C	B	C	90	50%	45
Car	D	D	D	0	100%	0
